who I am and my objective:

A motivated, curious and proactive developer with a passion for building software with creative solutions. Currently, I'm working with agile, TDD, continuous integration and cloud, so hope that I can help and learn more with the team. I'm very interested in learning more about this position because ThoughWorks seems to be a place that fits in the way that I like to work.

where I studied:

2012 – 2014 **Master's Degree** CEFET-MG

Course: Mathematical and Computational Modeling

Study Line: Modeling, Optimization and Process Improvement

2008 – 2011 **Bachelor's Degree** UNIFOR-MG

Course: Computer Science

what I've been working:

2013 - now Working at **FITec** as a Software Engineer, I'm helping a team distributed in 3 countries to migrate an existing software, that handles with video processing, to the cloud (AWS). We also are building Grails applications for this system that provides some cool features. We use current practices, methodologies and tools that give us a better way to do our deliveries faster and with more quality. I think that the most cool thing that I helped to implement was the auto-scaling that reduced costs related with our cloud's bill in the company.

main programming languages that I know well:

Java (4 years)
Groovy (1,5 years)
SQL (1 year)
Perl (1 year)

practices and methodologies that I work:

TDD
Continuous Integration
Automated Testing
DevOps
Agile (Scrum and XP)
Cloud Computing

tools, frameworks and other things that I use:

Amazon Web Services
AngularJS
DBeaver

Git
Gradle
Grails
Groovy
IntelliJ IDEA
Jenkins
Linux
Puppet
Spock
Tomcat
Trello

conferences that I went:

2014 - front<in>bh (Belo Horizonte)

2014 - AWS Summit (São Paulo)

2013 - QCon (São Paulo)

2013 - AWS Summit (São Paulo)

other things that I want to mention:

I started to do some internal presentations in my company about some recent implementations (Auto-Scaling).

Before start to work at **FiTec**, I worked with in a company customizing an ERP using Java EE and Perl. Also with Java EE, I worked as an trainee in the TI department inside my college helping to create a huge application to support the students needs. During the college I also worked in a research related with the cement industry helping to build a Java desktop application.

I'm always trying to learning and increase my development skills. Currently I'm doing two online courses in edX (www.edx.org) related with advanced POO concepts and Linux.
