Who I am

Passion for building software with quality and creative solutions for who will use and maintain. TDD and Clean Code as essential skills in my day to day. I'm also playing a little with blockchains and advocating for privacy on the internet.

Where I studied

2012 – 2014 **MSc** in **Mathematical and Computational Modeling**
Centro Federal de Educação Tecnológica - CEFET-MG

2008 – 2011 **BSc** in **Computer Science**
Centro Universitário de Formiga - UNIFOR-MG

Main Jobs

2014 - 2017 I worked at **ThoughtWorks** as a consultant developer in different projects with different flavors. These projects involved the creation of dashboards and APIs as microservices to make reusable when creating new products. One of the roles that I played in the last one was to bring new practices and advocate for quality, bringing awareness about the subject for other members. Another cool project was a content management for a news site where the privacy and security in all aspects were consider as our first citizen.

2013 - 2014 In **FITec** as a Software Engineer, I participated in a distributed team in 3 countries to migrate an existent software, that deals with video processing, to become a service using AWS. We also create one web application to this system with a lot of new features.

Things that I know

Strong   Java's actual tech stack
Continuous Delivery and Integration
TDD and Automated Tests
DevOps (AWS, Containers, Pipelines and Infrastructure as Code)
Agile Mentality

Medium   Groovy and Python
Front-End
Perl
